Response to Amendment

In view of the applicant's amendment filed January 20, 2004 the rejection of the claims under 35 USC 102(e) as anticipated by Inbasekaran has been withdrawn because the claimed invention requires the polymer to be a block copolymer where each block in the copolymer comprises the components that provide one of the emissive, the positive charge transport or the negative charge transport functionalities. Also, the cancellation of claims 21, 24 and 66-116 is acknowledged; claims 1-20,22-23,25-65 and 117-130 are presently pending. However, claims 1-20,22-23,25-65 and 117-130 are subject to a new ground of rejection under 35 USC 102(e) as anticipated by Wu et al (US 2003/0045642A1) newly cited.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-20,22-23,25-65 and 117-130 are newly rejected under 35 U.S.C. 102(e) as being anticipated by Wu et al (US 2003/0045642A1) newly cited.

Wu et al (US 2003/0045642A1) newly cited discloses an organic block polymer useful in an electroluminescent polymer device (or in a polymer field effect transistor) that includes an emissive polymer block that is consistently conjugated along the

Art Unit: 1711

polymer backbone of the emissive polymer block (e.g., a copolymer of 2,7-linked 9,9-dioctyl fluorine and 4,7-linked 2,1,3 benzo thiadiazole) and a positive charge carrier polymer block that is consistently conjugated along the backbone of the positive charge carrier polymer block (e.g., a copolymer of 2,7-linked 9,9-dioctylfluorene and 4N, 4N'-linked N,N'-di(3-carboxomethoxyphenyl)benzidine) for transporting positive charge carriers to the emissive polymer block so that the positive charge carriers to the emissive polymer block so that the positive charge carriers can combine with negative charge carriers to generate light; which anticipates the claimed invention. See abstract; the claims; pages 1-7.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. These references are cited to show the state of the art of electroluminescent polymers/devices; Towns and Pichler.
